

DIY | Elacin RC

Whether you want to muffle annoying noise when doing chores around the house or during a flight in a hot-air balloon, for example, DIY Elacin RC hearing protectors allow you to enjoy your leisure time to the full.

DIY hearing protectors only attenuate as much noise as necessary and no more, because attenuating noise too much is just as annoying as attenuating too little. This feature makes DIY Elacin hearing protectors second to none. All sounds remain audible, only quieter.

Intended users

DIY Elacin RC hearing protectors are intended for various leisure activities, including odd jobs and sports.

Comfort

The new RC generation is also custom-made from medically classified soft silicone material.

Optimal speech intelligibility

The new DIY Elacin RC ensures even flatter attenuation. This guarantees optimal speech intelligibility and makes the RC the recommended hearing protector for work in (industrial) environments with a wide variety of noise levels. With this latest generation of hearing protection, Elacin offers users enhanced and continuous safety in the work place.

Material + colour

DIY Elacin RC hearing protectors are made from silicone (60 shore) material and supplied in aqua and with a cord by default.

Especially for:

- + DIY enthusiasts
- + Visitors to hospitality venues
- + Visitors to events (sporting and other)
- + Athletes
